

The
Catalog of
Synonymous Dimensions

by Russ Hanush

Preface

The Catalog of Synonymous Dimensions is a compilation of over 900 measurements from the literature, and their dimensionality. It is organized in two parts: an alphabetical listing and a numerical listing by dimensional coordinates, (t, d, m, q) , where each component gives the respective power of the base dimensions time, space, mass, and electric charge.

In part A the data is tabulated according to the citation found in the literature, SI units for that measurement, measurement type, the name of the synonymous dimension listed in the table, dimensional coordinates of the measurement, and a reference to the source(s) where the data was found. In part B, the data is sorted by dimensional coordinates, the respective dimension found in the table, measurement type, citation from the literature, SI units cited in the source(s), and the sources' reference.
